THIS IS UNEVALUATED INFORMATION

1. A radio-tube factory was located in Fryazino (55°58'N/38°41'E), Moscow Oblast, 20 km from the Kremlin. (1)
2. The factory was in a former monastery and was being enlarged by the construction of a workshop of about 400 x 150 meters and a six-story building with a frontage of about 300 meters in which laboratories and workshops were to be installed. The framework of these buildings was completed by early 1946. They were to be equipped with machinery which, according to type plates, had been dismantled at the Telefunken Plant in Liegnitz, the Tungsram Plant in Budapest, and other undetermined installations. A box containing patent records and research reports had come from the Werner Plant in Siemensstadt. (2) From 20 to 30 grid-winding machines of US origin had been set up but were not yet in operation.
3. The plant was scheduled to manufacture US types of radio and teletype tubes. Experiments were allegedly made with cathode rays in the plant laboratories.

4. About 20 German engineers who had allegedly worked in a Lorenz plant in Czechoslovakia were employed at the plant. (3) A research department at the plant was generally called Corpus 8.

Comments.

(1) The data on the location of the plant agree with previous reports.

(2) The statement that the dismantled machinery observed in Fryazino had come from various firms indicates that experts in a specific field have been assembled there. This assumption is supported by the fact that the deported engineers working at the radio plant had previously been employed at different firms.
